

FARM Basic

FARM Basic

Agrovision develops management software for the pig farming industry. Providing support for technical and financial administration, the software aims to give the user a clearer insight into the operating processes so that adjustments can be applied when necessary. Whilst the basic software package is standard, it can be adapted to suit individual needs. It means that a uniform programme can be used by different kinds of businesses with a diverse range of activities. The user can decide which functions are required and for how long, without any modifications to the software being required. Agrovision is therefore suitable for any kind of business involved in the pig industry, whether it be a producer, sub-breeder, breeder or fattener.

With FARM Basic you are able to record the most common activities that will appear on a sow FARM. And this is available for a very basic price. For more information ore prices, contact your local FARM Software supplier.

Add/Edit

- Arrival/Culling Sows and Boars
- Service/Farrowing and weaning records
- Prewearing mortality

Reports

- Sow cards
- Action list / work list
- Service/Farrowing and weaning records
- Standard Farm report
