

## New in FARM version 7604

***Together with our clients we make our programs even better!***

Regularly we receive wishes and suggestions from our clients. We are very pleased with that: Our clients do know how we can improve our programs.

To find the modifications in the program, you can follow the numbers from the menu options. Don't you have numbers in the menu? Then go to: *'Miscellaneous, Settings, General'* and select *'Numbers in menu'*. When you restart the program, the numbers are visible.

## Software Upgrades

### General

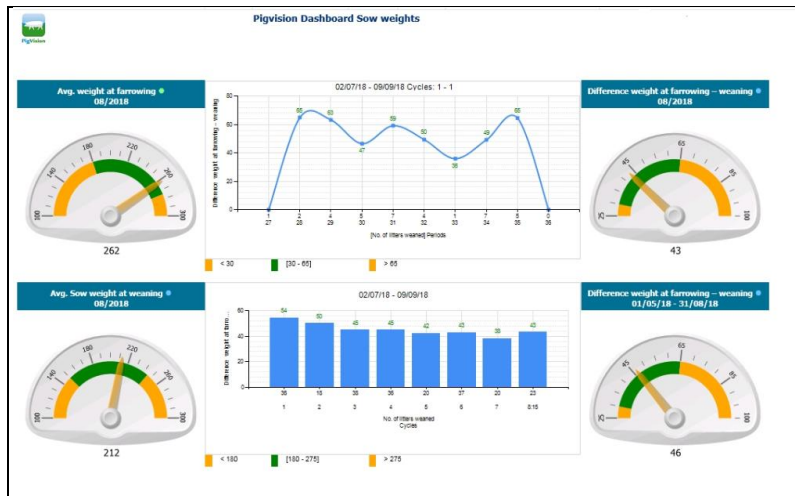

#### FARM & PigVision mobile

The FARM database has been adapted in preparation for the link with PigVision mobile: The application that allows you to enter animal data in the house via your Smartphone. More information about PigVision Mobile follows soon!

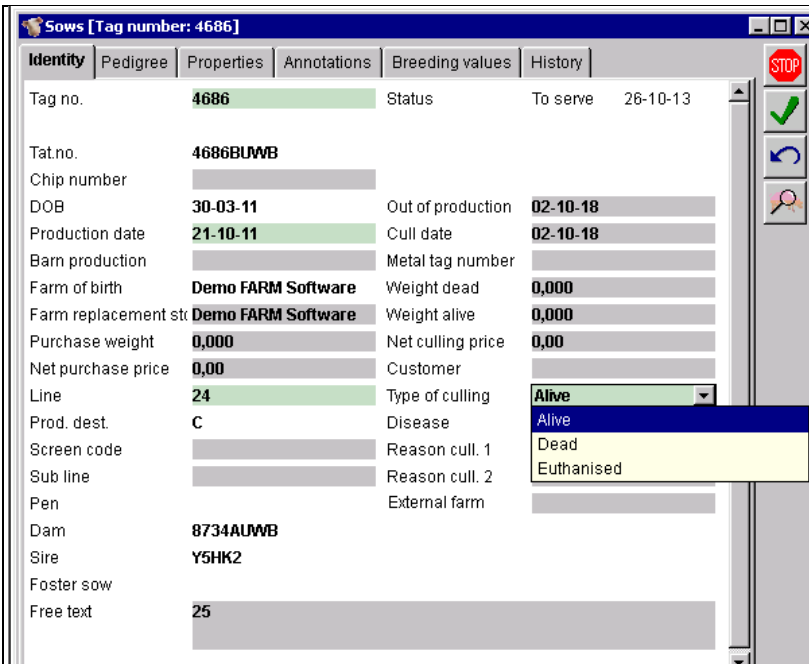

## Weight at insemination

It is possible in FARM to determine the weight at insemination. If you send your data to PigVision, it is also possible to make further weight analyzes there.

## Euthanasia

When importing mortality from individual animals, you can now also indicate whether the animal has been euthanized. Animals with the code 'Euthanasia' are counted among the deceased animals. This code is also included in the EDI messages sent to the breeding organization.

The screenshot shows the 'Sows [Tag number: 4686]' form. The 'Identity' tab is selected. The form contains the following fields:

Tag no.	4686	Status	To serve	26-10-13
Tat.no.	4686BUWB			
Chip number
