WinOpti
The versatile Optimizer

Cease the day with WinOpti

WinOpti is a feed optimisation program for the agricultural and food industry. The program is developed in co-operation with the feed, food and livestock industries, universities and advisory services to handle wet feeds, dry feeds, additives and premixes. All types of feed recipes can be optimised. The program has an almost limitless data capacity while retaining ease of use due to its speed and flexibility. It always calculates the cheapest recipes from the demands placed upon it. Registering ingredients in spreadsheets can be a thing of the past.

Why WinOpti?

WinOpti provides nutritionists in the livestock feed industry, pet food industry, food industry and premix industry the ideal optimization tool which helps them to develop, manage, store, analyse, collaborate and exchange feed formulas. All in order to help increase productivity and minimize costs.

Customized optimizing software

WinOpti is designed in modules that can be combined to meet each users requirements. The user can decide which windows they require to be active and where on the screen they should be placed. Using the shortcut icons the program makes it quick and easy to choose

the required function. Registration of data can be done quickly and easily, ensuring minimal data-entry errors.

To ensure a complete overview the nutrients can be divided into different groups for different requirements, i.e. animal feed groups. With WinOpti you can collaborate with the same data, either at the same location or worldwide.

‘It is a flexible system, quick and easy to use. It is logically structured. The calculations are credible and you can search on virtually all data. Another advantage is that AFI's application center in Argentina also uses WinOpti so you can follow each other's work and have access to the same data.

Before we introduced WinOpti we searched the market. We tried at least 10 different systems but WinOpti won.'

Niels Rauhe, Arla Foods Ingredients (AFI)

AgroVision:

Smart software

Smart software by AgroVision

AgroVision provides specialized software packages for the entire sector from their passion for farming. Thousands of pig farmers use AgroVision packages on adaily basis. AgroVision software allows them to control their company.

Would you like to know more about WinOpti or one of the many other software options AgroVision provides for the agrarian sector? Please contact us at phone number +31 (0)570 664 111 or info@agrovision.com.

Primarily feed for animals, but also foods or fertilizers or whatever needs mixing!

WinOpti is different from similar software, because:
- WinOpti is highly scalable, why pay for more than needed
- Unseen adaptabilities
- WinOpti integrates to any 3. party system
- Extremely low response time on adaptations, sometime only a few hours
- Highly business experienced support and programming personnel, capable of innovative thinking

Always ready to advise and help

Our support is always ready to advise and help you setup WinOpti. And, after the setup, we will give you a thorough introduction. Together we decide which areas we need to focus on. You can always call or e-mail us. It's important for us to get you started optimizing your daily work as soon as possible!

WinOpti is powered by AgroVision

AgroVision supplies specialized software for the international agricultural sector. We have subsidiaries in Belgium (CercoSoft) and Denmark (AgroSoft). Through our subsidiaries and distributors, we supply and support our software nationally and internationally.
