

AgroVision Analytics

Get more out of your pig data

As a busy pig farmer you collect an increasing amount of data. This data can be collected via management recording on your mobile phone, feeding stations, climate control and various types of scales. But you also exchange data with slaughterhouses and genetic companies. The key question is what can you do with all this data?

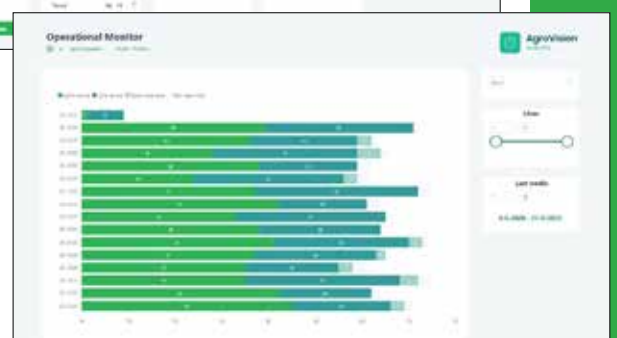

MyAgroVision.com

To ensure this amount of data works best for you, we are now introducing our MyAgroVision customer portal which hosts our new AgroVision Analytics reporting. Via this portal we make your data accessible in clear, interactive reports wherever and whenever you need it.

Operational Monitor

The first report we present to you is the Operational Monitor.

The Operational Monitor gives you greater insight into your daily operations and improved management information to help guide your processes. You can easily click through the reporting of services, farrowings, weanings, attention animals and piglet mortality.

AgroVision: Smart software

Smart software by AgroVision

AgroVision provides specialized software packages for the entire sector from their passion for farming. Thousands of pig farmers use AgroVision packages on a daily basis. AgroVision software allows them to control their company.

Would you like to know more about AgroVision Analytics or one of the many other software options AgroVision provides for the agrarian sector? Please contact us at phone number +31 (0)570 664 111 or info@agrovision.com.
